Linatron® - M1

Modular high-energy X-ray source

The Linatron®-M™ is a modular system. The control console, modulator, and RF unit are common to all model configurations. Only the X-ray head changes to match the application. The Linatron - M is designed to fit mobile, gantry, and fixed installations.

1.0 Standard Equipment and Services

1.1 Control Console
The standard control console is a touch screen display system. An optional desktop PC control console is available (see section 4.4).

Touchscreen Control Console

1.2 X-ray Head Low Leakage (0.1%)

1.3 Modulator/Power Distribution Cabinet
External signal interface

1.4 Temperature Control Unit (TCU)
The TCU is used to keep the system components at a nominal 30°C (86°F). It is available in high voltage and low voltage configurations for environment ranging from -40/+55°C (-40/131°F), condensing.

1.5 Standard Spare Parts Kit
The standard spare parts kit includes over 40 items such as PC boards and individual components.

1.6 Interconnecting Cables (X-ray Head to Modulator. Modulator to Console) and Hoses (TCU to X-ray Head) Included. Lengths up to 100 meters.

1.7 Manuals and Data Books
Two sets of operator and maintenance manuals and data books are included in English.

1.8 Installation Supervision and Start-up Assistance

1.9 Varex's Standard Warranty

2.0 Performance

X-ray Head and RF Unit

2.1 X-ray Beam Quality
The X-ray beam quality is specified using Half Value Layer (HVL) steel. This corresponds to the nominal X-ray energy shown in Table 1. These HVL numbers are derived from a compilation of broad beam data measurements.

Table 1

Model	Nominal Energy (MeV)	HVL (in)	Flatness (% @ ±7.5°)	Max. Dose Rate (Gy/min)
M1	.95	0.59	≥82.0	.10 - .25

2.2 X-ray Beam Dose Rate (10 cm x 10 cm field)
The maximum continuous dose rate at 1 meter is listed in Table 1 (without flattening filter).

2.3 X-ray Field Size
A 30° cone or 22.5° square defines the field. Also see section 4.1.

2.4 X-ray Beam Focal Spot Size
The focal spot size does not exceed 2.0 mm in diameter.

2.5 X-ray Beam Symmetry
The beam asymmetry does not exceed 5% at +/-7.5° off the central axis for all energies.

2.6 Radiographic Quality
The Linatron-M system will demonstrate at least ASTM E 94 1-2T, or equivalent, sensitivity over the ranges given in Table 2 using film detection.

Table 2

Model	Nominal Energy (MeV)	Range (mm)
M1	.95	38-101

2.7 Standard Leakage Radiation
The leakage radiation is specified along the horizontal axis at 1 meter from the beam centerline at angles 60° and greater, outside the primary beam. The values in Table 3 are a fraction of the primary beam central axis dose rate measured with a 10 cm x 10 cm collimator. Leakage is taken with the primary beam completely blocked. See section 4.2 for lower leakage options.

Table 3

Model	Leakage (fraction)
M1	$1x10^{-3}$

3.0 Customer Facility Requirements

3.1 Electrical Requirements

3.1.1 The Linatron-M operates from a single 15 kVA 50/60 Hz power source. Two voltage ranges are available.

3.1.1.1 Low Voltage Option
208 VAC, 3 phase, 3 or 4 wire plus ground, 60 Amp minimum surge per leg. +/-10% voltage regulation is required.

3.1.1.2 High Voltage Option
400 VAC, 3 phase, 4 wire plus ground, 40 Amp minimum surge per leg. +/-10% voltage regulation is required.

3.1.2 The TCU is connected to a separate 13-kVA power source. Models are available that can operate on a line voltage of 220 VAC and 400 VAC, at 50Hz; or 220 VAC and 480 VAC, at 60Hz. A separate 10-kVA power source may be required for the in-line heater package.

3.2 Operating Environment

Indoor Requirement
The operating environment for control console and modulator must be between 4°C (39°F) and 35°C (95°F), with 90% maximum relative humidity (non-condensing).

Modulator

3.2.2 Outdoor Requirement
The available temperature range for X-ray head/RF unit is dependent on the TCU and thermal insulation blanket. The range can be absorbed as -40/+55°C (-40/131°F), condensing.

3.2.3 Ventilation
The appropriate heat given to room air from each component with system operating at full power is given below:
X-ray Head/RF Unit: 1.0kW
Modulator Cabinet: 2.0 kW
Temperature Control Unit: 6.0-12.0 kW
Touchscreen Control Console: Negligible

4.0 Optional Equipment

4.1 Custom Beam Collimation
Nonstandard field sizes are available per customer's requirements. A motorized collimator is also available to quickly change the beam collimation.

4.2 Lower Leakage Options are listed in Table 4.

Table 4

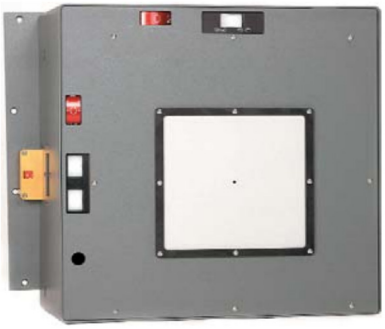
Model	Leakage (fraction)		RF Unit/Head Wt. (lbs)	
	Super Low	Ultra Low	Super Low	Ultra Low
M1	2×10^{-5}	2.5×10^{-6}	2,100	5,100

4.3 Voltage Regulator
Recommended for installations where line power short-term fluctuations are greater than +/-5%. A step-up or step-down transformer can also be ordered to adapt a non-standard voltage source for use with the Linatron or TCU. The regulator is CE and UL approved.

4.4 Desktop PC Control Console
The desktop PC control console provides the same system control as the touch screen console but has a larger viewing screen plus data storage capability. Heat given to room air is 0.5 kW.

4.5 Laser Alignment System
An internally mounted single spot laser is available to align the X-ray beam to an object being radiographed.

4.6 Variable External Collimator
The variable jaw external collimator is available in a fixed or rotational version. The jaws in each orientation open symmetrically to produce a field size from 1° to 24°. The rotating version can rotate over a range of -50° to +50°.



External Collimator with Rotation

4.7 Remote Customer Interface
A 37-pin Amphenol socket is provided on the modulator for interface to customers equipment. Signals include:
For a complete description of these signals, request document #100015302.

- External Trigger
- Emergency Off
- Remote Interlock
- Warning Lights
- Warning Alarm
- X-ray on Request
- Warm Up and Power On Status
- Fault Information and Reset

CE Marking

All Linatron-M models are designed and manufactured in accordance with the Electromagnetic Compatibility Directive 89/336/EEC and Low Voltage Directive 73/23/EEC.

ETL Marking

All Linatron-M models conform to UL STD 61010A-1 and are certified to CSA 1010.1.

CSA certification is pending for the Mi-6 and Mi-9 products.

Quality Standard

Varian Security & Industrial Products, Las Vegas Facility, Quality Management Systems is registered to ISO 9001:2008.
